

Wile 251 Bale Probe

Bale probe for baled hay

The **Wile 251** bale probe is intended for measuring moisture content in baled dried hay. The probe is compatible with Wile 25 and Wile 26 meters.

This 50 cm long W251 bale probe measures moisture content in dried hay bales. The probe can be used to measure humidity in small bales, square bales as well as round bales.

If you wish to measure moisture content in loose hay, choose the [Wile 253 dish probe](#).

Please note that you always need a Wile meter for making any measurements; a probe alone does not produce results.
