CRESCENT[®]

Diamond Tip Screwdrivers

Trusted by the Trades.

More Grip at the Tip

Diamond coating resists slipping even on worn screws

A diamond particle infused coating gives the tips of these screwdrivers up to four times the grip of non-coated tips, greatly reducing slippage and cam-out. The handle design features thermoplastic rubber molded over a tri-lobe shaped acetate core. The grip and comfort provided by the tri-lobe design allows users to apply up to 20% more torque than with more traditional handle styles. The translucent acetate used on the handles is also specially formulated to provide superior impact and UV resistance.

Manganese-Phosphate Coated Shafts

For superior resistance to corrosion

Size Markings

On ends of handles for quick picking when carried in a tool belt

Diamond Coated Tips

Provide 4X grip vs. uncoated tips; resists slipping and cam-out

Laser-Etched Markings

Provide permanent, easy-to-read identification

Co-Molded Tri-Lobe Handles

Made from thermoplastic rubber/acetate, transmit 20% more torque
