- Multi Module
- Ultra heavy duty construction
- Designed for harsh environments
- Front or rear stud mount
- Fully ADR Compliant

Description:

The Perei CRL408 & CRL410 Series Twin Jumbo range of combination lamps offers the ultimate in quality, durability and reliability. The twin module design is loaded with a high strength ABS base with stop/rear position and rear direction indicator with integrated reflectors. The CRL408 series maintains the legacy coloured lens style for standard applications, while the CRL410 series features clear lens multimode technology illuminating the function colour when operating. It also looks visually modern in vehicle application. Built and designed specifically for heavy duty applications, these lamps feature a high heat and enhanced UV protective coating, meaning these units are highly durable in even the most harsh operating conditions. This series suits replacement, OE, caravan and heavy vehicle applications.
