

MINI BOOST

BM PRO's MiniBoost is a compact DC-to-DC charge-booster for the RV market offering effective charging of your Caravan or Campertrailer's house battery from the towing vehicle's electrical system, even if the voltage delivered from the tow vehicle is lower than required for a recharge.

The MiniBoost provides a 2-stage charging profile, delivering an efficient and controlled current until the battery is charged. Designed to function when wired directly to most 12V Lead Acid batteries, MiniBoost is also supported by BM PRO's BatteryPlus35 and J35 systems.

KEY FEATURES

-  DC-DC charger specifically for RV applications
-  Input over-current and reverse voltage protection
-  Output over-current & short circuit protection
-  Output reverse connection protection
-  BM PRO signature durability and ease of use

SPECIFICATIONS

Input	10V - 16V
Output	(V) 14.4 (Constant Voltage) (A) 8-18A (CC) Dependent on input voltage
Battery Type	12V Lead Acid (all types)
Operating Temp	0° - 50° C Ambient Thermally protected
