

PNEU-TYRE SEAL

PRODUCT INFORMATION SHEET

PNEU-TYRE SEAL

Pneu-Tyre Seal is a high tech soluble, high density fibre solution that is designed to seal punctures in all pneumatic tyres. It is the fibre that repairs the punctures. Pneu-Tyre Seal will not dry or harden and will provide you with protection against normal punctures in the tread area of your tyre caused by an object up to 6mm in diameter. If used within the manufacturers recommendations, it will last for the life of the tyre. Pneu-Tyre Seal will prevent flat tyres caused by normal puncturing situations. It is not necessary to rebalance tyres after insertion of the sealant.

ADVANTAGES:

Pneu-Tyre Seal is

- Easy to use in all Pneumatic tyres
- Will self repair punctures
- Saves you from inconvenience and loss of downtime
- Will not dry or harden
- Reduces tyre temperature and so increases the life of the tyre
- Is water based and can easily be washed out
- Rust inhibitor prevents rims rusting
- Will repair numerous punctures
- Lasts for the life of the tyre
- Is Australian made and owned.

APPLICATION: **SHAKE BOTTLE VIGOROUSLY**

To insert PNEU-TYRE SEAL into your tyre

- deflate your tyre
- remove valve
- attach the filler hose over the valve stem
- insert the top of the bottle
- squeezing the bottle will force the tyre sealant into the tyre.
- Inflate tyre and replace valve.

As Pneu-Tyre Seal has a high concentration of fibre, the bottle must be shaken vigorously and the product mixed thoroughly. It is the fibre that repairs the puncture.

Suitable for all pneumatic tyres, no matter what size. It will work effectively on high pressure or low pressure tyres. Pneu-Tyre Seal lines the inside of the tyre tread while the wheel is in motion and will work only when the wheel is revolving.

RECOMMENDED for work situations and off road use.
